CAPTION: Prevent mpox with ***TWO*** doses of the vaccine.

- Avoid close or intimate contact with people who may be infected.
 - Watch for symptoms.
 - Get tested. Treat and then isolate, if you test positive.
- Learn more: health.ny.gov/mpox

GRAPHIC:

CAPTION: Get vaccinated, with ***BOTH*** doses to protect yourself. Anyone can get mpox. It's important to know the symptoms, how it spreads and what to do if you are exposed. Learn more: health.ny.gov/mpox

CAPTION: Mpox can spread to anyone through:

- Direct contact with mpox rash, scabs or body fluids.
- Prolonged exposure to respiratory secretions.
- Intimate physical contact such as sex.

It takes two vaccinations for the best protection.
