

NYSDOH STATEWIDE MOSQUITO-BORNE DISEASE ACTIVITY REPORT September 12, 2019

The New York State Department of Health (NYSDOH) collects, compiles, and analyzes information on mosquito-borne disease activity in New York State (NYS) and produces this weekly report during the mosquito season. Data in this report reflects testing performed by both NYSDOH's Wadsworth Center Laboratories (WC) and the New York City Department of Health and Mental Hygiene's (NYCDOHMH) Public Health Laboratory (PHL). Reports are generally issued on Wednesdays and reflect data reported through the previous Saturday.

Summary:

From September 6 through September 9:

• West Nile Virus (WNV):

- 35 WNV-positive mosquito pools were identified. (Erie 1, Nassau 3, NYC 25, Rockland 1, Suffolk 4, Westchester 1)
- o 0 human cases of WNV infection were reported.
- 0 equine cases of WNV infection were reported.
- 0 WNV presumptive viremic donors were reported to the Centers for Disease Control and Prevention (CDC).¹

Eastern Equine Encephalitis Virus (EEEv):

- 0 EEEv-positive mosquito pools were identified.
- 0 human cases of EEEv infection were reported.
- 0 equine cases of EEEv infection were reported.
- 1 caprine case of EEEv infection was reported.² (Oswego 1)

Zika Virus (ZIKV):

- Aedes albopictus was not identified in any additional counties. Aedes aegypti was not identified anywhere in the State.
- 0 mosquito pools were positive for Zika virus.
- 0 human cases were reported to NYSDOH. No cases of Local mosquito-borne transmission (LMBT) were identified.³

Chikungunya Virus (CHIKV), Dengue Virus (DENV), and Malaria:4

- 0 human cases of CHIKV infection were reported to NYSDOH. No cases of LMBT were identified.
- 1 human case of DENV infection (Westchester 1) was reported to NYSDOH. No cases of LMBT were identified.
- 2 human cases of Malaria infection (Suffolk 1, Westchester 1) were reported to NYSDOH. No cases of LMBT were identified.

Year to date:

• WNV:

- 396 WNV-positive mosquito pools have been identified.
- 0 human cases of WNV infection have been reported.
- o 0 equine cases of WNV infection have been reported.
- o 0 WNV presumptive viremic donors have been reported to CDC.

EEEv:

- o 46 EEEv-positive mosquito pools have been identified.
- 0 human cases of EEEv infection have been reported.
- 5 equine cases of EEEv infection have been reported.
- o 1 caprine case of EEEv infection has been reported.

ZIKV:

- Aedes albopictus has been identified in 5 counties (Nassau, Orange, Rockland, Suffolk, Westchester) and in NYC. Aedes aegypti has not been identified anywhere in the state.
- o 0 mosquito pools have been positive for Zika virus.
- 3 human cases have been reported to NYSDOH. No cases of LMBT have been identified.

CHKV, DENV, and Malaria:

- 1 human case of CHIKV infection has been reported to NYSDOH. No cases of LMBT have been identified.
- 17 human cases of DENV infection have been reported to NYSDOH. No cases of LMBT have been identified.
- 31 human cases of Malaria infection have been reported to NYSDOH. No cases of LMBT have been identified.

¹Presumptive viremic donors (PVDs) are people who had no symptoms at the time of donating blood (people with symptoms are deferred from donating) through a blood collection agency, but whose blood tested positive in preliminary tests when screened for the presence of West Nile virus. Some PVDs do go on to develop symptoms after donation, at which point they would be included in the count of human disease cases by their state.

²Caprine – of, relating to, or being a goat.

³Local mosquito-borne transmission is defined by the absence of the following epidemiological risk factors: recent travel to a country or region with known active ZIKV transmission OR sexual contact with a recent traveler from these areas; recent blood transfusion; recent laboratory exposure to ZIKV; or mother-to-child transmission during pregnancy. NYCDOHMH directly reports human cases of ZIKV infection to CDC.

⁴NYCDOHMH directly reports human cases of CHIKV, DENV and malaria infection to CDC.

2019 West Nile Virus Surveillance Summary

^{*}The number of WNV positive mosquitoes, mammal infections or human cases depends, in part, on the amount of surveillance and testing performed in each county, and is not necessarily associated with the degree of WNV risk.

⁻⁻ Map shows results reported through date range indicated.

2019 Eastern Equine Encephalitis Virus Surveillance Summary

^{*}The number of EEE positive mosquitoes, mammal infections or human cases depends, in part, on the amount of surveillance and testing performed in each county, and is not necessarily associated with the degree of EEE risk.

⁻⁻ Map shows results reported through date range indicated.

2019 Aedes aegypti/albopictus Surveillance Summary

^{*}The total number of Aedes aegypti or albopictus identified within a county depends on the amount of surveillance performed in each county, and is not necessarily associated with degree of Zika risk.

Map Scale: 1:3,000,000

⁻⁻ Map shows results reported through date range indicated.

2019 Mosquito-borne Illness Surveillance

*Current week positives are highlighted with a yellow halo around the respective specimen symbols.

- -- Human cases represent local mosquito-borne transmission (LMBT). Travel associated cases are not included.
- -- NYC positive human cases are placed randomly in the patient's county of residence.
- -- Map shows results reported through date range indicated.
